which bind to a HLA molecule on a cell, and provoke lysis by cytolytic T cells (CTLs) specific for a complex of the HLA molecule and nonapeptide. The nonapeptides can be used diagnostically to identify tumours expressing a particular HLA molecule, or to identify cancer cells. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             R99345 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      nonapeptide can be used in a vaccant of nonlog that a subtype cancerous cells. The nucleic acts involving HLA-Al subtype cancerous cells. The nucleic acts involved the nucleic acts in the peptide described and is encoded to the peptide described and is encoded.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure; Page 20; 33pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New nona:peptide derived from tumour rejection antigen precursor - presented by HLA-Al cancer cells, for use in diagnosis or therapy of esp. melanoma and breast cancer.
                                                                                                                 R99343-R99350 represent MAGE nonapeptides, based on the tumour reject antigen region of the full length MAGE sequences. These peptides wer used to design the nonapeptides of the invention (see R99337-R99342),
                                                                                                                                                                                                                                                                                         New nona:peptide(s) that bind
by specific cytolytic T cells,
tumours and to expand T cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   01-FEB-1996;

The peptide sequences may also be used to expand specific CTLs in vitro for later return to the patient, such as for treating melanoma. Tumour cells can be identified by using DNA encoding the nonapeptides as probes. Non-human cells transformed with the HLA-Al gene and a DNA sequence encoding one of the peptides, can be used to generate CTLs, or to detect the presence of CTLs in human samples. The non-human transformed cells, when polyttansformed, are universal effector cells, and can be used in vaccines, or for treating melanoma or breast cancer.
          Y45390 to Y48214 represent specifically claimed immunogenic peptides having a human major histocompatibility complex (MHC) Class I (also known as human leukocyte antigen (HLA)) binding motif. The immunogenic peptides can bind to a specific HLA allele (i.e. HLA-A subtypes HLA-A2.1, A1, A3.2 on A24.1 or HLA-B or C) and induce a cytotoxic T cell response against the antigen from which the peptide is derived. Cytotoxic T lymphocytes (CTLs) which destroy antigen bearing cells are normally induced by an antigen in the form of a peptide fragment bound to a HLA molecule, rather than the intact foreign antigen itself, and are particularly important in tumour rejection and in fighting viral
                                                                                                                                                                                          Claim

      This peptide is a tumour rejection antigen presented by a HLA-B44 molecule and derived from a MACE-12 tumour rejection antigen precursor (TRAP). Claimed tumour rejection antigens (W23038-4) are able to bind to HLA-B44 positive cells, making them useful in identifying cells which present HLA-B44 molecules on their surfaces for use in the diagnosis and therapy of cellular abnormalities. The complex of the tumour rejection antigen and HLA molecule provokes a cytolytic T cell response. The tumour rejection antigens, or complexes of tumour rejection antigens and HLA-B44, can be used as vaccines to treat disorders characterised by expression of the TRAP molecule such as cancer, especially melanoma. Vaccines can also be prepared from cells which present the tumour rejection antigens and several from cells which present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       or prevent viral infections and cancers in mammals (especially humans) e.g. prostate cancer, hepatitis B and C, AIDS, and renal carcinoma. They can be administered as vaccines to elicit an immune response in individuals susceptible or otherwise at risk of viral infection or cancer, or used to treat chronic or acute conditions. They are also useful diagnostically, and can be used to induce a cytotoxic T cell produce CTLs ex vivo for infusion back into a patient. The polynucleotides encoding the immunogenic peptides are also useful therapeutically and for immunisation as above.
                                                                                                                                                                                                                                       Tumour rejection antigens presented by molecules - useful to identify HLA-B44 and therapy of cellular abnormalities

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RESULT
                                     The present sequence represents in-chain hydroxylase CYP81B1 of Jerusalem artichoke. CYP81B1 is a microsomal cytochrome P450 that catalyses the omega-2, omega-3 and omega-4 hydroxylation of capric, lauric and myristic acids. The major metabolite is the comega-3-hydroxylated compound. The invention provides isolated nucleic acids (see x58400-06) encoding plant fatty acid hydroxylases (see v05896-902). Also claimed are host cells, transgenic plants and compositions consisting of the plant fatty acid hydroxylase, a process for isolating additional fatty acid hydroxylase genes from a plant, and a process of altering the fatty acid composition in a plant by expressing the plant fatty acid hydroxylase in a transgenic plant. Manipulating or epoxidating a fatty acid composition in a plant by expressing the plant fatty acid acid composition in a plant by expressing the plant fatty acid acid composition in a plant by expressing the plant fatty acid acid composition in a plant by expressing the plant fatty acid acid composition in a plant by expressing the plant fatty acid acid composition in a plant by expressing the plant fatty acid acid content of plants will modify resistance to drought and cattack by insects and other pests. The transgenic plants may also be used as sources of hydroxylated and epoxidized fatty acids useful in the manufacture of e.g. lubricants, ant-slip agents,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                      Y34584-Y35879 represent the proteins encoded by all the open reading frames in the complete genome (see X91990) of Chlamydia pneumoniae. C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see Y34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions.
                                                                                                                                                                            Sequence

The binding molecule is spermine or a spermidine derivative. Nucleotide sequences A3663-A3652 and peptide sequences Y9845-Y98500 are used in the construction of the transporter system of the invention. The transporter system is used in gene therapy, particularly to deliver nucleic acids to hepatocytes, muscle cells or bone forming cells, e.g for treating cardiovascular disease, cancer, and infection. The transporter systems are also used to create transgenic animals (as models for human carcinogenesis or disease or for drug testing). Other uses include transforming cells to produce proteins, or transfecting cells in vitro to study the function of the nucleic acid. The use of a surface ligand allows specific targeting of selected cells and tissues. The lytic agent provides for release of the nucleic acid into the cellular interior, from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       System for transporting nucleic acid into cells, useful etherapy and for generating transgenic animals, comprises linked to nucleic acid, surface ligand and lytic agent
                                                                                                                                                                                                                                                                                                Nucleic acid transport system; NTS; cell surface receptor; cytosis; nuclear membrane; lysis moiety; transgenic animal; human disease; nucleic acid delivery; cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a transporter system for delivering nucleic acid to a cell. The system comprises a nucleic acid binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 2000-281993/24.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              20-MAR-1992;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a nucleic acid transport system (NTS) for Cd delivering nucleic acid into a cell. The NTS contains but is not limited Ct to 5 components: (a) the nucleic acid or a macromolecule to be delivered; (C) a molety that recognizes and binds to a cell surface receptor or Cd antigen or is capable of entering a cell through cytosis; (c) a nucleic acid or macromolecular molecule binding molety; (d) a molety that is CC capable of moving or initiating movement through a nuclear membrane; and/ CC or (e) a lysis molety that tenables the transport of the entire complex CC from the cell surface directly into the cytoplasm of the cell. The NTS CC delivers nucleic acid into the cellular interior as well as the nucleus CC of specific cells. The NTS can be used to treat disorders by targeting CC specific nucleic acid accordingly. The NTS can also be used to create transgenic animals for assessing human disease, such as cancer, in an allows the role of various nucleic acids to be studied by targeting specific expression into specifically targeted tissue culture cells. The CC systs agent within the NTS avoids the problem of endosomal/lysosomal

The complexes are simultaneously bound to the nucleic CC acid. The nucleic acid transporter system can also be used in a method CC for the in vivo targeting of the insertion of DNA into a cell. It can CC also be used in processes for producing transformed cell lines. The CC system can be used to deliver a variety or proteins and polypeptides, CC such as hormones, growth factors, enzymes, clotting factors, and polypeptides, viral antigens, parasitic antigens, and bacterial antigens. The transporter system uses lysis agents to overcome the problems of CC endosomal/lysosomal degradation seen with prior art systems.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

The sequence was deduced from the cDNA obtd. from a clone isolated from a cDNA library prepd. from RNA extd. from fibroblast INR-90 cells (ATCC CCL-186). The N-terminal of the alpha chain is unclear. The sequence shows homology to hHGF except between AAS 162 and 166 of this sequence which is absent from the TCF-II sequence. The DNA can be used to produce the TCF II by recombinant DNA technology. TCF II is an anticancer agent and induces differentiation of leukaemia cells, enhances cell-mediated immunity, and accelerates the proliferation of human blood vessel endothelial cells and hepatic parenchymal cells.

It can be isolated from conditioned medium of human embryonic lung fibroblasts. The DNA encoding PGLF can be obtd. from a DNA library of M246 human embryonic lung fibroblasts. The sequence may be used in the determn. of the level of mRNA transcripts encoding the protein which may be useful in the diagnosis of malignancy. The amino acid sequence shown here is that given in the specification, it differs from the expected translation of the PGLF gene at amino acids 175 - Pro, which
The sequence was deduced from a portion of HLC3, one of two clones, (for HLC2 see R15623) isolated from a cDNA library prepd. from mRNA extracted from human leukocytes. HLC2 has almost the same sequence as HLC3 except for five residues (162-166) in HLC2 which do not appear in HLC3. HLC3 shows similar characteristics to the human liver-derived HGF identified in Nature, 342, 440, 1989, but differs at 14 positions in the amino acid sequence. The DNA sequence can be expressed and the resulting protein, recombinant HGF, used in hepatocyte research, esp. into the mechanism of hepatoma, and to prepare anti-HGF antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Disclosure;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            endothelial
                                                                                                                                                                                                                                                                                                                                                 Recombinant human leukocyte-derived hepatocyte growth factor with DNA encoding it, recombinant expression vectors and transformant cells expressing it.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          07-JUN-1991;

Tsuda E;
                                                                                                        A human foetal lung fibroblast library was screened with a synthetic probe coding for the N-terminal sequence of TCF-II. A cDNA clone was isolated and sequenced. The coding sequence can be incorporated into a plasmid and transformed into a microorganism for production of TCF-II. The protein itself can be used as a liver cell growth factor or a tumour cell killing factor. See also Q21067-9.

It has physiological activity, and using it enhanced growth of hepatocytes is possible. It is useful as a clinical diagnostic reagent, or a drug for treating hepatic disease.

C. :FUNCTION: DNA GYRASE NEGATIVELY SUPERCOILS CLOSED CIRCULAR DOUBLE-CONTROL OF OTHER TOPOLOGICAL ISOMERS OF DOUBLE-STRANDED DNA IN AN ATP-DEPENDENT MANNER AND ALSO CATALYZES THE INTERCONVERSION OF OTHER TOPOLOGICAL ISOMERS OF DOUBLE-STRANDED DNA RINGS, INCLUDING CATENANES AND KNOTTED RINGS.

C. -- CATALYTIC ACTIVITY: ATP-DEPENDENT BREAKAGE, PASSAGE AND REJOINING OF DOUBLE-STRANDED DNA.

C. -- SUBUNIT: MADE UP OF TWO CHAINS. THE A CHAIN IS RESPONSIBLE FOR DNA BREAKAGE AND REJOINING; THE B CHAIN CATALYZES ATP HYDROLYSIS. THE ENGRME FORMS AN AZBZ TETRAMER.

C. -- SIMILABITY: BELONGS TO TYPE II TOPOISOMERASE FAMILY.
